

KatanA Rendering — HTML Centering

This fixture exercises HTML centering (past bug: left-aligned instead of centered).

English | [日本語](#)

1. HTML Centering (Past Bug: Elements Left-Aligned Instead of Centered)

1.1 `<h1 align="center">` — Centered Heading

KatanA Desktop

↑ The heading "KatanA Desktop" should be **horizontally centered** in the panel.

1.2 `<p align="center">` — Centered Paragraph

A fast, lightweight Markdown workspace for macOS — built with Rust and egui.

↑ The description text should be **horizontally centered** in the panel.

1.3 Multiple Consecutive Centered Blocks

Centered Heading

Centered description paragraph.

Second centered paragraph — should NOT overlap with the first one.

↑ All three elements should be on separate lines, all centered.

1.4 Badge Row (Multiple Link Images on Same Line)

License MIT CI passing platform macO

↑ Three badges should appear on the **same line**, centered.

(If they are on separate lines, that's a bug.)

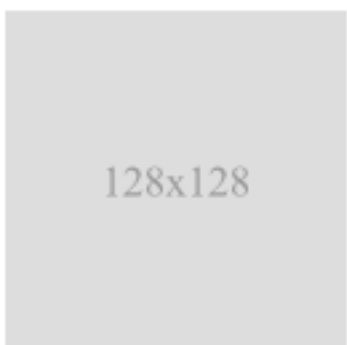

1.5 Mixed Text + Link Centering

English | [日本語](#)

↑ "English | [日本語](#)" should appear on the same line, centered

.

1.6 Full README Header Reproduction

KatanA Desktop

A fast, lightweight Markdown workspace for macOS

↑ Icon → heading → description → badges → language selector, all centered in order.

✔

Verification Complete

If all sections above render correctly, HTML centering is working.
